

# Variety denomination:

Many will wonder, with so many varieties, how do the names come about?

As a rule (with exceptions, of course), one notes the year when one found or sighted this plant, for example:

**15 = 2015** in the seedlings noticed and separated

**-010-** this year was the 10 founding

**-006-** still had 6 of the same types

**JP** = Code of the finder or breeder

SO:

**JP 15-010-006** this number then became the variety 'Marena JP'

**Hepatica x transs-japonica Marena JP**
